### **Working Papers**

“Market Responses to Vaccine Recommendations” with Laura E. Henkhaus and Emily C. Lawler, Revisions Requested at *Journal of Policy Analysis and Management*

We provide novel evidence on how pharmaceutical companies and consumers respond to government-endorsed health recommendations. In 2014, the Advisory Committee on Immunization Practices recommended that elderly adults receive the pneumococcal vaccine Prevnar 13. Using a difference-in-differences identification strategy, we first show that the manufacturer (Pfizer) responded by increasing direct-to-consumer advertising. We then show that the recommendation increased Prevnar 13-related information-seeking behavior and pneumococcal vaccination. Overall, our analyses suggest that the recommendation directly increased Medicare Part B drug expenditures by over \$14 per beneficiary and Pfizer product sales by approximately \$1 billion annually, with little to no observable health benefits.

“Information Shocks and Health Behaviors: Evidence from Breast Cancer Screening Recommendations” with Emily C. Lawler

We provide novel evidence on how health care decision-making responds to changes in information by studying the effects of the United States Preventive Service Task Force’s 2009 decision to stop recommended mammogram screenings for women aged 40-49. Using a difference-in-differences identification strategy, we find that after the update women aged 40-49 were 1.4-4.9 percentage points less likely to report ever receiving a mammogram than their 50-59-year-old counterparts. We also identify large spillovers onto women aged 35-39: post-2009 they were significantly less likely to receive a mammogram recommendation or a mammogram. Additional analyses suggest the revision reduced overdiagnosis of early-stage tumors.
